1 Number Theory

1.1 Euler totient

```
Number of ints \le n coprime to n (c.f. sieve for primes).
int phi(int n, vi& primes) {
   int res = n;
   for (int p : primes) {
      if (1LL * p * p > n) break;
      if (n % p == 0) {
        while (n % p == 0) n /= p;
        res -= res / p;
    }
   if (n > 1) res -= res / n;
   return res;
}
```

1.2 Fast exponentiation

```
O(log b): fast a<sup>b</sup> mod p.
int modular_exp(int a, int b, int p){
   int res = 1;
   while(b > 0){
      if(b & 1) res = (1LL * a * res) % p;
      b = b >> 1;
      a = (1LL * a * a) % p;
   }
   return res;
}
```

1.3 Sieve of Eratosthenes

```
O(n log log n) sieve[i] = 0 if i prime, spf otherwise for fast fact
vi sieve(int n){
    vi sieve(n,0);
    for(int i = 2; i*i < n ; i++)
        if(!sieve[i])
        for(int j = i*i ; j < n ; j += i)
              if(!sieve[j]) sieve[j] = i;
    return sieve;
}</pre>
```

2 Data Structures

2.1 Fenwick Tree

Point update, prefix and range sum, O(log n), O(n) build

```
struct Fenwick {
   int n; vector<ll> t; //using long long, int might overflow.
   Fenwick(vector<ll>& a): n(a.size()), t(n+1,0) {
      for(int i = 1; i <=n; i++) { // Builds tree from array in O(n)
            t[i] += a[i-1];
      int p = i+(i&-i);
      if(p<=n) t[p] += t[i];</pre>
```

```
}
}
void add(int i,long long v){
    for(;i<=n;i+=i&-i) t[i]+=v;
}
long long sum(int i){
    long long r=0;
    for(; i>0 ;i -= i&-i) r += t[i];
    return r;
}
long long sum(int l,int r){ return sum(r)-sum(l-1); }
};
```

2.2 Union find

```
Complexity: effectively O(1)
struct union_find{
    vector<int> rank, parent;
    union_find(int n){
        rank.resize(n, 0); parent.resize(n);
        for (int i = 0; i < n; i++) parent[i] = i;</pre>
    }
    int find(int i){
        int root = parent[i];
        if (parent[root] != root) return parent[i] = find(root);
        return root;
    void unite(int x, int y) {
        int xRoot = find(x);
        int vRoot = find(v):
        if (xRoot == yRoot) return;
        if (rank[xRoot] < rank[yRoot]) parent[xRoot] = yRoot;</pre>
        else if (rank[yRoot] < rank[xRoot]) parent[yRoot] = xRoot;</pre>
            parent[yRoot] = xRoot;
            rank[xRoot]++;
} union_find;
```

3 Graph Algorithms

3.1 Max Flow Min Cut

Dinic's max flow $O(V^2E)$, $O(E\sqrt{V})$ for bipartite/unit Edges from reachable nodes after flow form a min cut.

```
struct FlowEdge {
   int v, u;
   long long cap, flow = 0;
   FlowEdge(int v, int u, long long cap) : v(v), u(u), cap(cap) {}
};
struct Dinic {
   const long long flow_inf = 1e18;
   vector<FlowEdge> edges;
   vector<vi> adj;
   int n, m = 0;
   int s, t; // source, target
   vi level, ptr;
```

```
queue<int> q:
Dinic(int n, int s, int t) : n(n), s(s), t(t) {
    adj.resize(n);level.resize(n);ptr.resize(n);
}
void add_edge(int v, int u, long long cap) {
    edges.emplace_back(v, u, cap);
    edges.emplace_back(u, v, 0);
    adi[v].push back(m):
    adj[u].push_back(m + 1);
    m += 2;
bool bfs() {
    while (!q.empty()) {
        int v = q.front(); q.pop();
        for (int id : adj[v]) {
            if (edges[id].cap == edges[id].flow) continue;
            if (level[edges[id].u] != -1) continue;
            level[edges[id].u] = level[v] + 1:
            q.push(edges[id].u);
        }
    return level[t] != -1:
long long dfs(int v, long long pushed) {
    if (pushed == 0) return 0:
    if (v == t) return pushed:
    for (int& cid = ptr[v]; cid < (int)adj[v].size(); cid++) {</pre>
        int id = adi[v][cid]: int u = edges[id].u:
        if (level[v] + 1 != level[u]) continue;
        long long tr = dfs(u, min(pushed, edges[id].cap - edges[id].flow));
        if (tr == 0) continue;
        edges[id].flow += tr;
        edges[id ^ 1].flow -= tr;
        return tr;
    }
    return 0:
long long flow() {
    long long f = 0:
    while (true) {
        fill(level.begin(), level.end(), -1);
        level[s] = 0; q.push(s);
        if (!bfs()) break:
        fill(ptr.begin(), ptr.end(), 0);
        while (long long pushed = dfs(s, flow_inf))
            f += pushed:
    }
    return f;
vector<pii> min cut edges() {
    vector<bool> vis(n, false);
    queue<int> q;
    q.push(s); vis[s] = true;
    while (!q.empty()) {
        int v = q.front(); q.pop();
        for (int id : adj[v]) {
            auto &e = edges[id]:
            if (!vis[e.u] && e.cap > e.flow) {
                vis[e.u] = true:
                q.push(e.u);
        }
```

```
}
    vector<pii> cut;
    for (auto &e : edges) {
        if (vis[e.v] && !vis[e.u] && e.cap > 0) {
            cut.push_back({e.v, e.u});
        }
    }
    return cut;
}
```

3.2 Shortest Path

```
Find shortest paths from src (no negative weights). O((V+E)logV)
```

```
vi dijkstra(const vector<vector<pii>>& adj, int src) {
    vi dist(adi.size(), INT MAX);
    priority_queue<pii, vector<pii>, greater<pii>> q;
    dist[src] = 0; q.push({0, src});
    while (!q.empty()) {
        auto [d, u] = q.top(); q.pop();
        if (d != dist[u]) continue;
        for (auto [v, w] : adj[u]) {
            if (d+w < dist[v]) {</pre>
                dist[v] = d+w:
                q.push({d+w, v});
            }
        }
   }
    return dist;
}
```

O(VE) Shortest Path+neg edges; BFS from nodes with dist $-\infty$ for all neg-cycle reachable.

```
vector<int> bellmanFord(int n, vector<vector<int>>& edges, int src) {
  vector<int> dist(n, INT_MAX);
  dist[src] = 0;
  for (int i = 0; i < n; i++) {
    for (vector<int> edge : edges) {
      int u = edge[0];int v = edge[1];int wt = edge[2];
      if (dist[u] != INT_MAX && dist[u] + wt < dist[v]) {
         if(i == n - 1) return {-1};
            dist[v] = dist[u] + wt;
      }
  }
}
return dist;
}</pre>
```

All-pairs shortest paths (neg edges ok, no neg cycles) $O(V^3)$ graph[i][i] = 0, graph[i][j] = w if edge i - > j else INT_MAX

3.3 Toposort

Topological sort, works for non connected graphs.

```
void dfs(int u, vector<vi> &adj, vi &vis, vi &res) {
    vis[u] = 1;
    for (int v : adj[u])
        if (!vis[v])
            dfs(v, adj, vis, res);
    res.push_back(u);
}
vi toposort(vector<vi> &adj) {
    int n = adj.size();
    vi vis(n, 0), res;
    for (int i = 1; i < n; i++)
        if (!vis[i]) dfs(i, adj, vis, res);
    reverse(res.begin(), res.end());
    return res;
}</pre>
```

4 Arrays

4.1 Inversions

Count pairs where order flips between arrays. O(nlogn)

```
11 inversions(vi& a, vi& b) {
    int n = a.size();
    unordered_map<int,int> pos;
    for (int i = 0; i < n; i++) pos[b[i]] = i + 1;
    Fenwick t(n); // C.f. Fenwick tree
    11 inv = 0;
    for (int i = 0; i < n; i++) {
        inv += i - t.sum(pos[a[i]]);
        t.add(pos[a[i]], 1);
    }
    return inv;
}</pre>
```
